Serial No. 09/411,568

Art Unit 1633

The instant application does not comply with the Sequence Rules (see 37 CFR §§ 1.821-1.825). The sequences in the Table on pages 39-40 do not comply with the Sequence Rules. See the attached notice to comply with the sequence rules. Any response to this Office action must include those items listed on the notice to comply with the sequence rules in order to be completely responsive to this Office action. The period for response to the notice to comply with the sequence rules runs concurrently with the period to respond to this Office action.

This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

The disclosure is objected to because of the following informalities.

- (a) The first sentence of the application should contain all of the data in connection with the parent applications (see MPEP 201.11).

Serial No. 09/411,568

Art Unit 1633

(b) The status of each of the parent applications should be updated.

(c) At page 1, line 23, "complimentary" is a typographical error and should be changed to --complementary--.

Appropriate correction is required.

The abstract of the disclosure is objected to because it is too long and is more than one paragraph. Correction is required.

See MPEP § 608.01(b).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(a) The recitation of "designed to form a stem-loop intermediate . . . forming the stem" is vague and

Serial No. 09/411,568

Art Unit 1633

indefinite because it is not clear whether the nucleic acid does what it is "designed" to do. The claim should be amended to describe the function of the molecule and delete the intent behind the construction of the molecule.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5, 6, and 11-14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Nabel et al (WO 95/29993 (11/9/95)). Claim 6 of the reference describes a vector that has all of the characteristics of the vectors mentioned in the claims. It is noted here that any sequence may serve as a primer binding site.

Claims 2-4, 7-10, and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten

Serial No. 09/411,568

Art Unit 1633

in independent form including all of the limitations of the base claim and any intervening claims.

Certain papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Art Unit 1633 at (703) 308-4242. The faxing of such papers must conform with the rules published in the Official Gazette, 1156 OG 61 (November 16, 1993).

Any inquiry concerning this communication should be directed to J. Martinell at telephone number (703) 308-0296.
